

1. Create a sample empty webpage layout with html tags (just go through the sample image below)

2. Create a table consisting of at least five rows. Within this table, you must incorporate features such as column spanning, row spanning, cell spacing, and cell padding.

3. Insert at least three different images in your webpage. For each image, use the following attributes:

- src** to specify the image source.

- alt** to provide meaningful alternative text.

- width** and **height** to set the display size of the image.

- title** to show tooltip text when hovering over the image.

Include one image wrapped inside an `<a>` tag to make it a clickable link. Use the **loading="lazy"** attribute on one image to enable lazy loading.

4. Create a home page for your self introduction with html tags and styles with in tags concept.
